Multi-span Film Greenhouse

It's a kind of multi-span film greenhouse for growing vegetables or flowers. It has following features comparing with other kinds of greenhouse: Less structure use will reduce the structure shadow and provide more even sunlight for the plants.

- Lower cost than PC and GLASS greenhouses.
- Better at heat preservation in certain regions.
- We can provide various specifications in terms of span size, bay size, gutter height and roof height.
- All the systems from cooling system, irrigation system, computer control system and ventilation system, etc. can be provided. We can provide you a turnkey project.
- For installations, we have professional technicians abroad for guidance.

**Covering material:** 0.15 or 0.2mm plastic film; single layer film; double layer film; inflated double layer film

**Frame Work:** Double side hot galvanized steel structure
General Size:

- Span Length: 8m, 9.6m
- Bay Size: 4m
- Gutter Height: 3m-4m

Thailand Chrysanthemum Film Greenhouse
